DETAILED ACTION

The Amendment filed on July 17, 2006 has been acknowledged.

Withdrawal of Allowability

The indicated allowability of claims 5, 6, 9, 10, 25, 45, and 46 (now in claims 47-50, 55, 60, and 61 respectively) is withdrawn in view of the new grounds of rejection as follow.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 47-50, 55, 60, and 61 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

The claims do not produce any tangible results. The practical application of the claimed invention cannot be realized until the information determined is conveyed to the user.

For the result to be tangible, the stiffness parameters would need to output to a user or

displayed to a user or stored for later use by a user. Hence, the claims are treated as non-statutory functional descriptive material (see MPEP 2106 and <http://www.uspto.gov/web/offices/com/sol/og/2005/week47/patgupa.htm>).

Allowable Subject Matter

Claims 15, 16, 51-54, and 56-59 are allowed.

Reasons For Allowance

The **combination** as claimed wherein a damage information processor for receiving said stiffness parameters and outputting damage information (claims 15, 51) or the random impact device comprises: a random signal generating unit for generating first and second outputs; a random impact actuator for receiving said first and second outputs; and an impact applicator coupled to said random impact actuator and having an impact region; wherein said random impact actuator drives said impact applicator such that the force and arrival times of said impact applicator at said impact region are random (claim 56) is not disclosed, suggested, or made obvious by the prior art of record.

Gallagher (US 6,907,785) discloses a diagnostic sensor (Fig. 9a) for measuring a variation of a measure of the resonance as the stiffness of the element changes (Abstract, lines 1-6).

Response to Arguments

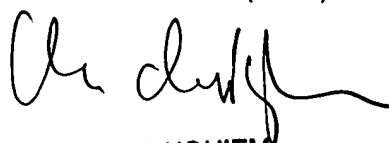

Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.
